

What's one of the most cost-effective ways to keep children in school?

Evidence to Action

Low-Cost, High-Impact Solutions for Global Health and Education

Thursday, April 15, 2010
University of California, Berkeley

Treating children for parasitic worms costs just pennies per dose... and keeps them healthy and in school

Ground-breaking research by UC Berkeley and Harvard has shown that school-based deworming can reduce absenteeism by 25 percent... and it costs less than 50 cents a year per child.

Now, the Government of Kenya is bringing deworming medicine to 3.6 million children in over 8,000 schools.

Please join us for a half-day symposium to learn how rigorous research helped to launch the Kenyan national deworming program.

Evidence to Action

Low-Cost, High-Impact Solutions for Global Health and Education

Thursday, April 15, 2010, 1:00 - 5:00 pm

University of California, Berkeley

Featuring speakers from:

The Government of Kenya
The World Bank
Deworm the World
Harvard University

In partnership with:

Center of Evaluation for Global Action
Deworm the World
Abdul Latif Jameel Poverty Action Lab
Innovations for Poverty Action

At the symposium, discover high-impact strategies for improving child health and development:

Deworming Programs

Increasing school attendance

Chlorine Dispensers

Reducing childhood diarrhea

Cement Floors

Fostering cognitive development
