About Future City

Future City starts with a question—how can we make the world a better place? To answer it, 6th, 7th, and 8th grade students imagine, research, design, and build cities of the future that showcase their solution to a citywide sustainability issue.

It’s engineering and more!

This flexible, cross-curricular educational program gives students an opportunity to do the things that engineers do—identify problems; brainstorm ideas; design solutions; test, retest and build; and share their results. Students participating in Future City:

✓ Apply math and science concepts to real-world issues.
✓ Develop writing, public speaking, problem solving, and time management skills.
✓ Research and propose solutions to engineering challenges.
✓ Discover different types of engineering and explore careers options.
✓ Learn how their communities work and become better citizens.
✓ Develop strong time management and project management skills.
