The Effect of Exclusive Enteral Nutrition Therapy on the body composition of children with active Crohn’s disease

Presented by Dr. Muhanad Alruwaithi PGY 5

Supervisor Mary Zachos, Associate Clinical Professor Pediatric Gastroenterology

Summary: Exclusive enteral nutrition (EEN) a first line therapy for inducing remission of pediatric Crohn’s disease is particularly useful in children with growth failure. In this study we will evaluate the changes in body composition of children with active Crohn’s disease using anthropometric measurements, bioelectrical impedance and Dual-energy X-ray absorptiometry during the stage of disease activity and after induction by exclusive enteral nutrition.

Objective: Seek input on the study in general

All faculty, research staff, allied health staff, and trainees are welcome to attend.

*These are interactive sessions - we want to hear your feedback, questions and great ideas!*
