BRISTLEBOT LAB
Elementary Lesson Plan

KEY LEARNING OUTCOMES
Learners will be able to improve observation skills.
Learners will be able to apply the scientific method to answer a question.

TIME REQUIRED
2-3 class periods (about 2 hours)

STANDARDS
CROSSCUTTING CONCEPTS EMPHASIZED
1. Patterns
2. Cause and Effect: Mechanism and Explanation
7. Stability and Change

SCIENTIFIC AND ENGINEERING PRACTICES
1. Asking questions (for science) and defining problems (for engineering)
3. Planning and carrying out investigations
4. Analyzing and interpreting data
7. Engaging in argument from evidence
8. Obtaining, evaluating, and communicating information

DISCIPLINARY CORE IDEAS
Kindergarten-Grade 2 - ETS1 Engineering Design
Students who demonstrate understanding can:

K-2-ETS1-1. Ask questions, make observations, and gather information about a situation people want to change to define a simple problem that can be solved through the development of a new or improved object or tool.
K-2-ETS1-2. Develop a simple sketch, drawing, or physical model to illustrate how the shape of an object helps it function as needed to solve a given problem.
K-2-ETS1-3. Analyze data from tests of two objects designed to solve the same problem to compare the strengths and weaknesses of how each performs.

3-PS2 Motion and Stability: Forces and Interactions
Students who demonstrate understanding can:
3-PS2-2. Make observations and/or measurements of an object’s motion to provide evidence that a pattern can be used to predict future motion.
4-PS3 Energy

*Students who demonstrate understanding can:*

- 4-PS3-4. Apply scientific ideas to design, test, and refine a device that converts energy from one form to another.

**College and Career Readiness Anchor Standards for Reading (K-5)**

Integration of Knowledge and Ideas

- 7. Integrate and evaluate content presented in diverse media and formats, including visually and quantitatively, as well as in words.
- 8. Delineate and evaluate the argument and specific claims in a text, including the validity of the reasoning as well as the relevance and sufficiency of the evidence.

**College and Career Readiness Anchor Standards for Writing (K-5)**

Text Types and Purposes

- 1. Write arguments to support claims in an analysis of substantive topics or texts, using valid reasoning and relevant and sufficient evidence.
- 2. Write informative/explanatory texts to examine and convey complex ideas and information clearly and accurately through the effective selection, organization, and analysis of content.
- 3. Write narratives to develop real or imagined experiences or events using effective technique, well-chosen details, and well-structured event sequences.

Production and Distribution of Writing

- 4. Produce clear and coherent writing in which the development, organization, and style are appropriate to task, purpose, and audience.

Range of Writing

- 10. Write routinely over extended time frames (time for research, reflection, and revision) and shorter time frames (a single sitting or a day or two) for a range of tasks, purposes, and audiences.

**COMMON CORE MATH STANDARDS**

Mathematical Practices

- 1. Make sense of problems and persevere in solving them.
- 2. Reason abstractly and quantitatively.
- 3. Construct viable arguments and critique the reasoning of others.
- 4. Model with mathematics.
- 5. Use appropriate tools strategically.
- 6. Attend to precision.
- 7. Look for and make use of structure.
- 8. Look for and express regularity in repeated reasoning.
ENGAGEMENT

1. Bristlebot Demo
   Introduce students to the Bristlebots via a demonstration. Some ideas for discussion questions:
   - What do you think propels the Bristlebot?
   - What do you notice about the movements?
   - What is the difference between movements that are random or part of a pattern?
   - Are these movements random?

2. Introduce Inquiry Question
   Pass out the Activity Page
   Read the Research Question together as a class:
   - How do the leg positions of the Bristlebot change its movement?

3. Cause and Effect Mini-lesson
   Complete the ‘Background Information’ section of the Student Page.
   Discuss the idea of cause and effect.
   Example questions:
   - What is an example of a cause and effect?
   - If we change one thing, can we measure the impact?
   - What is an example of a cause and effect we can measure?

4. Write a Hypothesis using an ‘If __, then__’ statement.
   Include a mini-lesson on the idea of a Hypothesis, depending on students’ previous background and exposure to the scientific method.
   - If the leg positions are changed, then the movement of the bristlebot (will / won’t) change.

EXPLORATION

5. Groups construct Bristlebots using the Instruction provided here.

6. Read the Procedure and explain the data collection process. There are six variations between a leg being pointed down, folded flat on the surface or bent off the ground.

   {INSERT SKETCHES/DIAGRAMS HERE}

7. Groups should sketch the Bristlebot leg positions as well as the movement it undertakes in 10 seconds.

EXPLANATION
8. After sketching the leg positions and Bristlebot motions, students should attempt to answer the Conclusion section questions.

**ELABORATION**

9. Students who complete can advance on to the Elaboration Page. Students should use their observation sketches to be able to predict the movement of the Bristlebots.

**EVALUATION**

10. Come back together as a class and share out answers to the following:
   - Was your hypothesis correct about how the leg positions would impact movement?
   - What potential errors did you make?
   - How would you potentially change this lab to test something slightly different?
   - *Which leg position did you choose for the target assignment?*
   - *Why did you choose that one?*

12. You could also expand the Target Page into a competition of which group can most consistently hit the targets on a variety of different pages.
