Several undergraduate researcher positions in aquatic ecology and limnology are available in Dr. Alan Wilson’s lab. Current lab research projects revolve around understanding the factors leading to harmful algal blooms in recreational and drinking water reservoirs and aquaculture ponds.

The undergraduate students will assist current lab members (including graduate and undergraduate students) with existing lab projects that include field experiments, large-scale lake surveys, and laboratory-based mechanistic studies and analytical analyses.

Preference will be given to freshman and sophomore applicants who are available 10-20 hours per week during the academic year. Starting dates and expected hours worked are flexible. Pay for this position is $8/hr.

Interested students are encouraged to email (1) a brief letter of interest, (2) resume including contact information for two references, (3) an unofficial copy of your transcripts, and (4) available work hours during the fall semester to Alan Wilson (wilson@auburn.edu) for full consideration.
