Our story started in 2014 when Gareth Castle amalgamated his long-standing passion for electronics and experience in the security solutions industry into a business. Gareth, a veteran with more than 11 years of professional experience in the security solutions industry established Integrated IP Solutions with the aim of creating a one stop solution that provides protection for your business and home. We install a host of sophisticated products tailored to best suit your homes, small to large businesses and commercial outlets alike, by safeguarding your assets with fully integrated security systems.
WHAT MAKES US DIFFERENT?

• Integrated IP Solutions is a SAIDSA Member.

• The objective of SAIDSA (South African Intruder Detection Services Association) is to upgrade the quality and standards of electronic security in South Africa and to protect the public from unscrupulous, "fly-by-night" installers. To be listed on SAIDSA’s Approved Register, we have complied with very stringent standards that have been laid down by SAIDSA in regard to alarm and CCTV installation services which sets us apart from all the rest.
  
  www.saidsa.co.za

• The owner manages the business meetings and works very closely with his skillful teams to ensure that all delegated tasks are completed at a high standard.

• We always think ahead, coming up with the smartest security solutions and 1st class designs on sites that cannot be beaten.

• We work with only the best brands, which are very well established globally and has a proven track record of providing excellent support and after sales.

• We at Integrated IP Solutions go out of our way to give guaranteed customer satisfaction and unlimited ongoing technical support.

• We are a highly professional and trusted company that takes pride in our work and service that we deliver.

• Our elite teams work with utmost precision, ensuring client satisfaction as well as peace of mind.

• We have three hardworking and dedicated teams that are ready to plan, implement and assist with state of the art security systems.

• Our teams receive regular updated training on and with all new technology.

• Part of our services includes using a mobile device allowing remote access to the system from a distance for your convenience.

• We offer quarterly and annual maintenance agreements to suit all your specific needs and requirements.
ACCRREDITATION

Accredited & Fully Compliant: PSIRA (Private Security Industry Regulatory Authority), SAIDSA (South African Intruder Detection Services Association) and ICASA (Independent Communications Authority of South Africa).

VERIFIER – Off-site CCTV Monitoring, Leaders in the field – We are very proud to announce our accreditation as Authorised Independent Installers through the support of Technical Installation and Product Design. They provide an invaluable preventative early warning service to our clients, with strong ties to Authorised and Community structures.

ADT Security, SA’S Leading Security Company – We are a registered Independent Installer through the ADT Independent Installer Program. Backed by ADT’s largest operational armed response footprint in the Western Cape, we are able to supply our clients with unimpeded service delivery and peace of mind. We are proud supporters of the Constantia Valley Watch Association to ensure a safer city for all.
SERVICES

• Off-Site Monitoring
• Surveillance Systems
• Video Analytics
• Thermal Imaging
• Security Systems
• Access Control
• Network Solutions
• Back Up Power Solutions
• LED Flood Lighting
WHAT OUR CLIENTS HAVE TO SAY

“Integrated IP solution designed and installed an extremely user friendly security system and offered us brilliant after service!”
Sue - Claremont

WHAT OUR CLIENTS HAVE TO SAY

“Integrated IP solutions tailored an automated surveillance and alarm system that was easy for me to use and understand and operate by just a touch on a button or phone. Their five star after service is what makes them unique!”
Nikki - Houtbay

WHAT OUR CLIENTS HAVE TO SAY

“Integrated IP Solutions has a particular attention to detail and so is recommended by a number of neighbours in the Upper Claremont and Upper Kenilworth area. Gareth has been instrumental in assisting Neighbourly in achieving its mission for the neighbours in which it servers. One such project is the Beacon Project. Their commitment has been demonstrated in donating the very first Beacon Point in the Grove Zone. On another front, their communication is on point, something that is the foundation of our business and service offering.”
Chris De Silveira - Neighbourly
Testimonials

What our clients have to say

“I have been incredibly impressed with the service levels and advice I received from Integrated IP solutions, which truly sets them apart from the competition!”

Greg - Camps Bay

Testimonials

What our clients have to say

“Thanks to Integrated IP Solutions we have a sophisticated security system that is user friendly and has all the apps & gadgets that makes it possible to monitor our cameras even when we are thousands of miles away from home on holiday”

Robert - Constantia

Testimonials

What our clients have to say

“Integrated IP Solutions installed a camera and security system at our home. The installation was professional, neat, effective and on time. The installation staff were pleasant to have around and unobtrusive. Highly recommended.”

Reiner - Claremont
TESTIMONIALS

WHAT OUR CLIENTS HAVE TO SAY

“Integrated IP solutions supplied us with an easy to use turnkey surveillance solution, the installation was meticulous and seamless!”

Mark - Claremont

TESTIMONIALS

WHAT OUR CLIENTS HAVE TO SAY

“5 star service, thank you all for fixing a problem that was not even your responsibility you just did it to help us. You are what we need in business, a company that goes over and beyond for their clients, and to even get a call from the owner to find out how everything went is absolutely BRILLIANT. Thank you for your OUTSTANDING service.”

Jami & The Jump Around Team

TESTIMONIALS

WHAT OUR CLIENTS HAVE TO SAY

“I have been working with Integrated IP Solutions for a few years and am extremely satisfied with the level of service I have always received!”

Penny - Bishopscourt
CUSTOMERS WE HAVE WORKED WITH
Your home is your family’s secure haven – and Verifier operators are trained to keep it that way. Verifier is an independent remote off-site CCTV monitoring service which fundamentally focuses on monitoring ‘triggered’ events, such as video analytics rule breaches, License Plate Recognition alerts and alarm activations. Verifier provides an indispensable deterrent early warning detection service.

**Why We Recommend Verifier Off-Site Monitoring:**

- Verifier is a frontier in the field and has the track record to prove this.
- Verifier is an independent off-site monitoring service with very close relations with various community structures as well as safety authority bodies.
- Verifiers specialist service is cost effective.
- All systems are customized to match your requirements and equal your budget.

Other than arduously watching and processing streaming video footage, Verifier controllers monitor events in real time, with the use of black screen monitoring. Thus, allowing the most methodical use of the controllers time and alleviates the weariness related to watching ongoing streaming video. The present day procedure of connecting a clients on-site CCTV cameras is via the internet, 3G and wireless networking. On the triggered event being received by the Verifier control room, the committed controller reacts and manages the occurrence according to a strict, predetermined protocol to assure ample response time and ensure your safety.
Surveillance Systems

Surveillance is the monitoring of behavior, activities or other changing information, for the purpose of managing, directing or protecting us. Integrated IP Solutions offers smart surveillance system solutions, customized to suit the requirements of your home, business or retail outlet. Our systems guarantee all around protection all the time, ensuring customer tranquility.

Surveillance systems provided by Integrated IP Solutions are App integrated, we are also partnered with Verifier enabling us to provide off-site monitoring for the most quintessential security. We specialize in the following; Thermal Cameras, Optical Cameras, PTZ Cameras, Video Analytics, LPR (License plate recognition), Off-site monitoring and Street Surveillance Projects.
When your family, home and business are well protected, you have peace of mind. At Integrated IP Solutions, securing what you value is imperative. That is why we offer cutting edge security systems tailored to best protect what is important to you. With the advantage of remote management, you can easily arm and disarm your security system from anywhere in the world via a web-enabled device, monitor who arrives and leaves your premises, as well as use a panic button to elicit an instant response from your alarm monitoring company.

Integrated IP Solutions never fails to provide you with unrivaled security solutions, as your protection is our priority. We specialize in the following: Alarm Systems, Early warning detection, Fire Detection, Remote Management and Electric Fencing.
Physical access control is a matter of who, when and where. An access control system determines who is allowed to enter or exit, where they are allowed to enter or exit and when they are allowed to enter or exit. Access control systems can cater for almost an unlimited number of users, with uniquely encoded key ring tags, biometrics or proximity cards. Integrated IP Solutions provides ultra-modern access control software that integrates the most advanced security technologies with innovative networking capacities to bring you full-featured security solutions providing for any size facility thereby giving complete protection and ensuring ultimate security. We specialize in the following: Biometrics, Time and Attendance, Proximity Tags, Automated gates and intercom systems.
We professionally setup your home and business network, ADSL, telephone lines and Wi-Fi internet access points by integrating your system for ease of use.

We specialize in the following; ADSL Configuration, Wi-Fi Access Points.
For South Africans, load shedding has become something to factor into our daily lives at home and work. Eskom has warned that load shedding will be a reality for the foreseeable future as it simply does not have enough generating capacity to meet electricity demand. As if power outages aren’t enough of a worry, they bring with them a host of attending problems: spikes, surges, and dips as a result of the unstable supply of electricity. Modern day appliances and electronic devices are extremely sensitive to these and could short circuit, malfunction or even be destroyed. Extra sensitive electronic equipment – computers, televisions, DSTV decoders – is especially vulnerable, with power problems the leading cause of data loss.

Over and above the increased risk of damage to electrical devices, power outages could mean that your home or premises may not be protected should your alarm system, surveillance system or your electric fence not work. Solar alarm systems, on the other hand, will continue to operate flawlessly during load shedding, when your premises are most vulnerable. You can rest easy knowing that your alarm system is fully functional throughout the load shedding period.
What Is Video Analytics?

Video analytics or video automatic incident detection is the technique of using a computer algorithm to monitor video (normally CCTV surveillance) cameras automatically in real time to provide management information and alarms.

How does Video Analytics work?

Video analytics or content analysis is the capability of automatically analysing video through the use of software to detect and determine events while providing information related to the events taking place in real time.

How can Video Analytics benefit me?

By processing live video in real time the following are typical security enhancements; identification of suspects, detection of trespassers into restricted or sensitive areas, identification of these trespassers in addition to proactive threat level assessment and identify predefined events and behaviour.
The software is designed to detect the human form so that false alarms from dogs, birds, deer, leaves, wind, etc. are eliminated. It can also watch vehicles. “Virtual tripwires” or “virtual fence” can be defined around any area and configuration. High definition images can be recorded when incidents are recorded. The software looks for suspicious behavior. Pre-set rules are programmed customized to your situation. For example, someone approaching an exit door from the outside is suspicious. Exiting is okay. Rules include an object in the area (person or vehicle); loitering in the area beyond allowed time; crowd alert (too many people congregating; object missing or removed. Our system can stand alone, or it can integrate with elements of your existing system. Your existing alarm and fire alarm system should remain in effect. However, video analytics can be applied to interior security as well. Stored data is more compressed because there is only recording of real incidents, not false alarms. Data can be stored for two years optionally. Otherwise typically storage is the most recent two months.

Thermal sensors cannot see glare. Glare from the sun blinds conventional video cameras, effectively hiding vehicles, people, and animals. Thermal sensors are immune to headlight glare. Headlights are confusing to video cameras, tricking them into triggering false and missed calls and making accurate observations of traffic at night impossible. Thermal sensors give you a much more reliable detection solution. Video cameras can miss pedestrians, cyclists, animals, and even cars if they’re in the shadows. Thermal gives you a long-range night viewing. At night, a road looks like an indistinct row of lights to a video camera, making meaningful data collection and incident assessment impossible. Thermal cameras compliment and complete your security camera network by giving you the power to see threats invisible to the naked eye, turning night into day. Thermal security cameras make images from the heat energy that is around us all the time, not from reflected visible light, giving you true 24/7 imaging capability without lights or illuminators. Thermal cameras penetrate atmospheric obscurants better and farther than visible light, allowing you to see what’s out there through haze, smoke, dust and even light fog. Day and night, through good weather and bad, close-up and far away.
CLEARING THE SHADOWS

One of the most obvious benefits of security lighting is that it rids your property of dark shadows where intruders or troublemakers can hide. With clear visibility of your property at night you have not only the security of knowing you can see anyone on your property, but it also alerts any potential intruder to the fact that they have no place to hide.

Aesthetically Pleasing

Your security lights can be used to help create a beautiful outdoor living space that is aesthetically pleasing and usable night or day.

Decrease the Critters

If you have small critters frequenting your property, security lighting can be a great deterrent. Motion sensors can scare off these wandering pests and keep your property clear of night time prowlers.

Increased Property Value

Security lighting is just one more feature that will help your property stand out if you ever consider selling. This upfront investment will increase the value of your property.

Neighbourhood Watch

If you live in a community then having security lighting installed ensures that not only can you watch out over your property, but so can your neighbours. They will easily be able to see someone lurking on your grounds and can give you a quick call to alert you of trouble.
BENEFITS OF LED FLOOD LIGHTS

✔ Lower energy costs
✔ Low to practically no maintenance costs
✔ Life expectancy between 8 and 20 years
✔ Lower total cost of ownership
✔ Improved personal and/or operational safety
✔ Enhanced security deterrent effect
✔ Your early warning alarm detection could be linked to toggle the lights, should you have an intruder on your property
✔ Automatically light up your property when entering/ exiting main points of entry.
✔ Remotely toggle your lights via your smart device
✔ Improved security video images
✔ Night-time colour video
✔ Enhanced facility appearance
✔ Battery backup options
