Building is about to blow up, move the collapse. “…It’s been imploded. It’s a hired job, done by a team that the collapse of WTC 7 could have only been caused by controlled demolition, as exemplified following statements prior to the onset of the collapse:

“Evidence of a severe high temperature corrosion attack on the steel, including oxidation and sulfidation with subsequent intergranular melting, was readily visible in the near surface of some ‘preliminary hypotheses,’ but conceded, ‘truthfully, I don’t really know. We’ve had trouble getting a handle on building No. 7’; and some “preliminary hypotheses,” but conceded, ‘truthfully, I don’t really know. We’ve had trouble getting a handle on building No. 7’…

The north face of WTC 7 saw vertical sequences of explosions and window breakage at the onset of collapse. Watch at:

Video shows vertical sequences of explosions and

For 2.25 seconds, or a third of its descent, WTC 7 fell at the rate of gravity over free fall. That does not

Rapidity:

World Trade Center Building 7 (WTC 7), a 47-story, steel-framed high-rise building, underwent a total collapse at 5:20 PM on the afternoon of September 11, 2001; and the steel frame of WTC 7 was almost entirely dismembered.

Symmetry:

The entire structure of WTC 7 collapsed to the ground, leaving no sections of the tower intact. The roofline of WTC 7 went from being stationary to being in free fall in seven seconds.

Free fall:

As the building fell, it maintained a near-symmetrical collapse. The building came down symmetrically into its own footprint, at free-fall acceleration, in under seven seconds.

The AIA Public Policies and Position Statements, architects are:

The AIA's belief that incidents involving the catastrophic failure of buildings and damage caused the collapse; and that incidents involving the catastrophic failure of buildings and damage caused the collapse; and

standards and Technology's (NIST) investigation into the World Trade Center disaster, NIST's lead investigator, Dr. Shyam Sunder, stated that NIST had shown that NIST's alleged collapse initiation mechanism had zero probability of occurring; and

Whereas, NIST has refused to release key portions of its modeling data to engineers studying the collapse of the building; and

NIST neglected to examine steel from WTC 7 with a "Swiss cheese appearance" that

NIST had been attacked by molten iron — as documented in Appendix C of the FEMA/ASCE Building

National Institute of Standards and Technology (NIST) began its investigation into the total collapse of WTC 7.

The AIA's support for a new investigation into the total collapse of WTC 7.

The AIA's support for a new investigation into the total collapse of WTC 7.

The 97 sponsors of this resolution, believe there is sufficient evidence contradicting NIST's opinion of independent engineers, had they been included, the computer model would have

We, the 97 AIA members listed below, have submitted Resolution 16-3 for your consideration at the 2016 AIA National Convention. We ask you to join us in calling for a new investigation into the total collapse of World Trade Center Building 7.
All the eyewitness, visual, and physical evidence do not support the official explanation. We need a real investigation to heal our country.”

— Jerry Erbach, AIA, Architecture and Urban Planning Consultant

The official story about the collapse of Building 7 doesn’t make sense. An independent investigation will determine whether demolition materials were used, as the evidence thus far indicates.”

— Eve Reynolds, AIA, ARResolution

It fell within 7 seconds approximately, from top to bottom.... Buildings just don’t behave like that—if floors fall, they tend to fall and are braced by the floor directly beneath it.”

— Stephen Barasch, AIA, Barasch Architects & Associates

My practice is 40% forensic, wherein I fix failures, and am familiar with failure mechanisms. The failure of Building 7 has never made sense to me and I would like to see a thorough investigation.”

— Ladd Ehlinger, AIA, Ehlinger & Associates

I support the call for a new investigation into the events of 9/11.”

— George Metzger, AIA, HMFH Architects, Past President of the Boston Society of Architects
Building is about to blow up, move it back. ... We are walking back, there's a building about to blow up.

Unidentified Emergency Worker

The specifics of the fires in WTC 7 and how they caused the building to collapse remain unknown at this time. ... [The best hypothesis has only a low probability of occurrence.]

— FEMA, May 2002

Building is about to blow up, move it back. ... We are walking back, there's a building about to blow up. Unidentified Emergency Worker

The specifics of the fires in WTC 7 and how they caused the building to collapse remain unknown at this time. ... [The best hypothesis has only a low probability of occurrence.]

— FEMA, May 2002
It is our ethical obligation to call for a new investigation into the total collapse of WTC 7.

Vote YES on May 21.
