PARTICIPANTS NEEDED
Piano studies across ages: the effect of learning strategies

Study participants needed to examine how children and adults learn to play the piano differently.

Participants will play a finger-tapping computer game that models piano playing. The experiment will take around 30-45 minutes and will include breaks. Participants must be between the ages of 7-9 and 20-35, be right-handed and have no keyboard experience, formal musical training or any diagnosed neurological, behavioral, developmental or vision disorders.

Compensation options for participation are: (1) $15 or (2) a free 30-minute piano lesson.

This work has been certified by the review ethics board and is supervised by Prof. Isabelle Cossette of the Schulich School of Music, McGill University. No risks are associated with this research. All participants’ confidentiality will be protected.

If you are interested, please contact Rebecca Reesor at rebecca.reesor@mail.mcgill.ca or Dr. Isabelle Cossette at isabelle.cossette1@mcgill.ca, to schedule an appointment.
