Mother of detainee Sayed Adnan al-Khabas said that Jaw Prison administration is denying her son from medical treatment. She added that this has been going on since he was arrested on 28 March 2014 from Nowrana coast and transported to Dry Dock prison. She demanded from Bahrain’s Ombudsman and the National Institution for Human Rights to take action for her son’s case.

She explained that since he was arrested from Nowrana coast in Karanah, he’s been suffering from severe pain as a result of a shotgun injury in his leg. He also has an old injury in his hand in which he lost all feeling due to being deprived from medical treatment for a long time during his detention in Dry Dock.

Dry Dock administration had taken him to Salmaniya hospital just before the ruling in his case was issued. The doctor told him that he is in immediate need for x-rays for his hand and leg. Also, he needs a surgical operation to remove shotgun pellets from his leg. She added that the doctor also told him that nerves in his hand are inflamed.

The court sentenced Sayed Adnan to 5 years in prison on 28 December 2014, after which he was taken to Jaw prison and was never taken to his appointment at the hospital to remove the pellets.
She explained that Jaw prison took him to the MOI's al-Qala’a hospital. The doctor there told him that the operation is not important.
